

Mobile-Friendly Website

Desktop Website

Non Mobile-Friendly Website

Your customers are looking for you on mobile, what are you showing them?

The mobile revolution isn't just coming, it's already here. According to Google, more than half of Americans currently own a smartphone, and by the end of 2015 there will be more smartphones on the Internet than PCs.

These Users are Looking for Your Business!

According to a recent study, the majority of users searching for a local business from a smart phone are looking to buy immediately. Give them quick access to important information such as services offered and business hours. Then let them call or find your business with a single click using the click-to-call or mobile maps buttons!

We specialize in building mobile websites that get results. We will build you a custom mobile website that will include all of your site's content in a mobile friendly format. Customers will see the mobile website automatically any time they visit your site from a smartphone!

FAQ

What is the difference between a regular site and a mobile optimized site solves?

A regular website is usually designed for viewing on a desktop computer. When viewed on a mobile device, the user experience isn't great. Buttons and text are smaller, navigating the site involves pinching and zooming the screen, and some elements might not work at all. A mobile-optimized sites solve this problem by having thumb-friendly buttons and access to contact information and directions in just one click.

What are the benefits of having a mobile optimized site?

The main benefit of a mobile optimized site is providing a great experience to your mobile users. Over 70 million Americans browse websites from their phone every month, so providing them with quick and easy access to information about your business is essential. A mobile optimized site also helps convert mobile traffic into customers with special features like Click-to-Call and Mobile Maps with Directions.

Which mobile devices are supported?

Works on all modern smartphones including iPhone, Android, most Blackberry devices, and Windows Mobile.

How do people find my mobile website?

When a user types in the URL of your regular website on their phone, they will be automatically redirected to your mobile site.
